EDUCATION

University of California, San Diego (UCSD)

Sep 2024 - June 2027

B.S. in Computer Engineering

GPA: 4.0/4.0

Awards/Honors: Provost Honors, Dean's List (Top 2% of class)

Relevant Coursework: Data Structures & Algorithms, Systems Programming, Computer Architecture & Organization, Linear Algebra, Discrete Math, Probability & Statistics, Graph Theory

EXPERIENCE

Uber | Software Engineer Intern

Sep 2026 - Dec 2026

- Incoming Software Engineer Intern, Compute Platform Infrastructure

Salesforce | Software Engineer Intern

June 2026 – Present

- Built synchronous and asynchronous multi-tenant Python storage clients that abstract AWS S3 and Google Cloud Storage behind a cloud-agnostic API; separated tenant resolution, cloud routing, and SDK I/O, reducing integration boilerplate across 5+ core services.
- Engineered configurable retry and circuit-breaker policies for storage operations, reducing unrecovered transient failures by 90% while keeping p99 retry latency below 2.5 seconds.
- Designed tenant-isolated credential resolution backed by mTLS service identity and single-flight caching, enforcing per-tenant credential boundaries while reducing redundant authentication calls by 95%.
- Deployed a containerized FastAPI service to Kubernetes with Terraform and Helm; validated 26 storage operations through integration tests and instrumented SLO telemetry with OpenTelemetry and Prometheus.

Existential Robotics Laboratory (ERL) @UCSD | Undergraduate Robotics Researcher

December 2025 – Present

- Implementing LiDAR-based SLAM and autonomous motion-planning algorithms in Python using ROS, Gazebo, and PyBullet for simulated robotic navigation.

SEDS @ UCSD | Software Engineer

Sep 2024 – Present

- Implemented a 100 Hz C++ thrust-vector-control (TVC) loop for an actively stabilized rocket, fusing asynchronous sensor streams with PID control and Kalman filtering to achieve sub-1° precision.
- Designed a distributed communication framework across dual microcontrollers and an onboard PC, implementing high-throughput data pipelines via CAN (1 Mbps) and SPI (4 MHz) for telemetry logging.

Forsys Inc | Software Engineer Intern

May 2024 – Sept 2024

- Developed a Python LLM assistant that converted natural-language questions into Salesforce API queries, reducing manual CRM lookups by 90% and increasing team productivity by 30%.
- Built a Salesforce-to-PostgreSQL ETL pipeline with batched loads, indexing, and automated health checks, reducing query latency from minutes to seconds.

PROJECTS

JarvisOS | Python, AI Models (local/cloud), OpenTelemetry, SQLite

July 2026

- Built JarvisOS, a terminal-first Python orchestration runtime that converts natural-language goals into validated workflows across local/cloud models, MCP integrations including Google Calendar and Gmail, and local plugins.
- Optimized workflow execution through direct-request short-circuiting, lazy MCP-server activation, session reuse, and bounded graph concurrency, cutting end-to-end latency by 40–75% across tool-driven workloads.
- Implemented SQLite-backed state for tasks, approvals, and execution traces, with structured logging, OpenTelemetry tracing, and Prometheus metrics for latency and reliability monitoring.

CompressBench | C++, Go, AWS, Compression Algorithms, Binary I/O, REST APIs

April 2026

- Developed a modular C++ compression benchmarking platform using bit-level streams, binary serialization, custom file headers, and extensible codec interfaces for lossless compression across text, binary, and raw image formats.
- Built a Go REST backend for compression and verification workflows; benchmarked 100+ files, reaching up to 65% space savings and 50+ MB/s throughput with CI/CD validation.

SKILLS

Languages: Python, Java, C++, Go, SQL, Bash

Infrastructure & Data: Linux, Docker, Kubernetes, AWS, GCP, PostgreSQL, SQLite, Redis, Terraform, Helm

Frameworks & Tools: FastAPI, OpenTelemetry, Prometheus, ROS, Gazebo, PyBullet, Git/GitHub, Bazel, Jenkins, Claude, Codex

Systems: Distributed Systems, Cloud Storage, API Design, ETL Pipelines, Concurrency, Observability, Binary I/O, Control Systems, Computer Vision
